- Control utilization rate.

Client Billing

- Track billable hours and expenses;
- Set hourly billing rates;
- Bill your clients and control payments.

Support and onboarding

Timetta is an enterprise solution that includes an excellent automation tool and a ready-to-use methodology framework. We help companies to build business processes by sharing our experience and best practices.

Alexander Spiridonov
Head of support service

Timetta is a simple and straightforward tool. Like any corporate information system Timetta requires initial setup and development of business processes.

The effectiveness of Timetta is largely determined by how well it is configured and integrated into the IT infrastructure and business processes of the company.

We are always ready to answer your questions and help with setting up the system.

Features

Timetta is a cloud-based service for time tracking, project management, resources allocation and project economy control. The system is tailored for consulting businesses and teams that track time for projects. Our service helps to boost projects profitability, increase employees workload and reduce overhead costs.

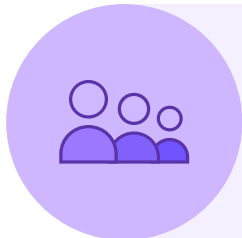

Timesheets & Time tracking

Timetta tracks time via timesheets and supports approval route, stopwatch, and other tools to deliver reliable intelligence. At the same time, Timetta is user-friendly and provides smooth user experience.

Project Performance Management

Timetta allows you to track projects' progress and budgets. Build a project team, use generic resources, set targets and tasks, control profitability, use P&L and forecast.

Resource Management

Resource management works seamlessly with other system functions. Project resource plans provide accurate data about planned labor costs. The booking calendar ensures that staff utilization is high and balanced.

Client Billing

With Timetta you can automate your client billing, which is extremely useful for T&M projects. Timetta allows you to set up a catalog of rates and manage them at the client or project level.

Analytics and Reports

Timetta is an accounting and analytical system that collects various data and provides analytics to company management. Any report can be exported to Excel.

Testimonials

STRELKA KB

Strelka is engaged in urban planning and project management. We have more than 350 specialists in our team.

We have been using Timetta for over a year to track working hours and costs for our projects. We have a creative team and therefore it is especially important that Timetta provides a simple and intuitive interface for filling timesheets.

During that period we have made an integration with the corporate budgeting system and now we automatically receive actual costing.

We recommend Timetta to medium and large companies in the field of consulting, engineering and architecture.

Deputy CFO
Strelka Consulting

MEF PKF been using Timetta for exactly one year. It took two weeks to get the system up and now more than 50 employees use Timetta.

Of course, time tracking, resource planning and project management were carried out before, without this the normal work of an audit and consulting company is impossible, but after implementation we reached a new level.

Today company managers monitor projects in dynamics. Data consolidation and performance evaluation take us much less time.

Timetta allows us to evaluate projects, employees and clients from different angles and be even more effective.
